Course Description

A survey of the world's major regions. Geographic concepts and principles are used to study the physical, economic, social and political conditions and problems in the culturally diverse world. Spatial expression of culture; specialized behavior patterns; adaptations and way of life in distinct environments. Regional interdependence; implications for development.

Course Overview

This course introduces you to the different regions of the world, their physical geography, climate, ecology, culture, people, politics, history, and economics. While the course does require you to know the countries and places in different regions, and a knowledge of such facts is important, emphasis will be given to several key socio-cultural issues and processes (in your textbook these are called “Geographic Insights”) that have shaped and are reshaping our world today.

We will examine several historical and contemporary themes. Firstly, we will explore the impact of colonialism and imperialism in different regions and its impacts on those regions. We will also study contemporary themes such as globalization, migration, urbanization, trade, conflict, etc. and how these forces shape the different regions of the world.

Ultimately, the course is not just about learning facts about regions but also (perhaps more) about understanding and critically examining the processes that shape and change the world. Having a broad and integrative approach to understanding cultural, economic, political and environmental phenomena will in turn allow for students to develop the critical thinking and reflective skepticism that can lead to environmental and social sustainability.

Course Objectives / Student Learning Outcomes (SLOs) for the BA Geography

The course is designed to introduce learners to the regions of our shared planet from a geographical perspective. At the end of the course, learners will be able to

1. Identify and define the different world regions, as well as understand the gendered and religious legacies of the societies of each region
2. Analyze the historical, political, cultural, and economic relationships that each region has to the rest of the world
3. Identify and critically analyze models of social and economic development in each region and how these have changed over time
4. Clearly and effectively communicate about issues associated with social justice and development in each region in writing and verbal formats
