#### Course Description

This course introduces students to environmental studies with a focus on the geographic aspect of policy and management of resources. The course will examine issues of sustaining our resource base (biodiversity, food, soil, water, and energy), a review of factors influencing sustainable use, and how humans have impacted these key elements of the natural system. This course will focus primarily on the social sciences and ethics and how they inform our management of natural resources.

#### Course Overview

This course will introduce learners to the approaches and problems associated with resource conservation in the first stages of the Anthropocene, a proposed era in which human activity has a geologically significant impact on the earth's atmosphere and ecosystems. Learners will be introduced to how political economy, political ecology, and environmental ethics are contributing to our understanding of broad issues such as population and world hunger, water and air pollution, forest management and soil conservation, environmental racism, and how these approaches are being remedied by championing a sustainable approach to managing human and non-human societies. The course will be split into (roughly) two sections: the first is a crash course into the fundamentals of political economy, ecology, and ethics as it relates to resource conservation; the second will discuss how understanding political ecology has informed efforts to create a sustainable world.

Class attendance and class participation are a critical part of the semester grade. This means that you must be prepared to discuss the readings assigned for the day. Imagine that you will be required to give a 2-minute (informal) oral presentation about course materials at the beginning of each lecture.

My teaching philosophy is predicated on the belief that students learn best from their peers, so while the first 4-5 weeks of the course will be conducted in a standard lecture format, the course will shift to a seminar format by the end of September or early October.

I also want you to reject the idea of learning as a passive activity; your goal should be to learn how to [communicate effectively](#) what you are thinking and learning. However, any lecture period can develop into a seminar format at any time. I encourage you to ask questions and I expect you to answer other students' questions. We always learn best from our peers.

## **Course Objectives / Student Learning Outcomes (SLOs)**

The course is designed to introduce students to the key concepts, themes, methodologies and tools of natural resource conservation. At the end of the course, learners should be able to:

1. Understand how human activity, broadly defined by history and political economy, informs our understanding of the ecological crisis
2. Apply the lessons that ethics, political economy, demography, ecofeminism, colonial history and UN SDG's gives us to resource use, globalization, population growth, environmental racism and novel ecosystems
3. Apply the philosophies of ecology, ecofeminism, queer ecology, climate justice and the science of conservation and restoration to evaluate current resource management approaches
4. Apply different approaches to creating a sustainable society by broadly linking energy use, sustainable agriculture, wildlife preservation, patriarchy, neoliberalism, and environmental racism to evaluate the movement for sustainable cities as potential drivers of climate justice

### **Course Materials:**

### Discussion Board Rubric

Rubrics will be used to grade your Discussion Board assignments and class participation. Each discussion board assignment will be graded in two categories: completing the assignment which will consist of a 1000-word reflection piece and responding to at least **four** peers' assignments coherently and constructively as to produce more discussion by your peers. Ideally, each new response builds on the previous responses.

The Discussion Board will be graded by

1. how well you answered the prompt, how well you examined all the material provided for the assignment, if you meet the word count minimum, and how many course concepts you utilized as appropriate to this assignment.
2. whether your post had a clear introduction and body with clear flow, with no spelling or grammatical errors, and how well your response went beyond description and how well you synthesized the materials provided to illuminate course concepts.
3. how well you incorporated superb outside academic knowledge and/or your own personal and/or family/work knowledge to further illuminate course concepts.
4. **how well you understood your peers' posts, and how well you used course concepts to reference their best or weakest points.**
