

Coast of British Columbia

Concerning the North Pacific Coast . . .

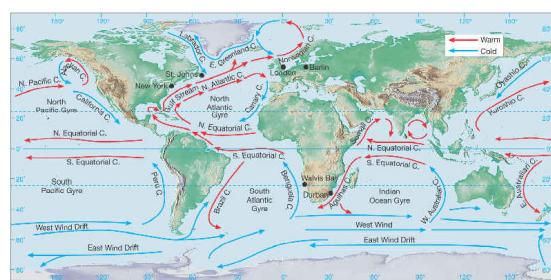

- A mild wet climate and rugged terrain.
- A testimony to tectonic and glacial activity.
- A heavily forested area with a traditional forestry economy under stress
- A handful of major metropolitan centers, of which Seattle and Vancouver are the most important linkages to Asian markets.
- A brief but intense summer tourist season.
- Problems with permafrost.

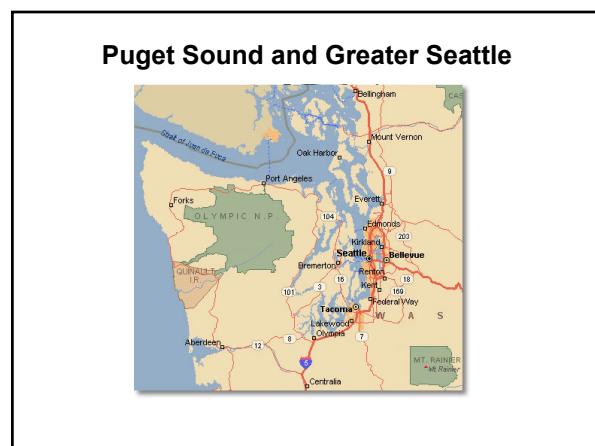

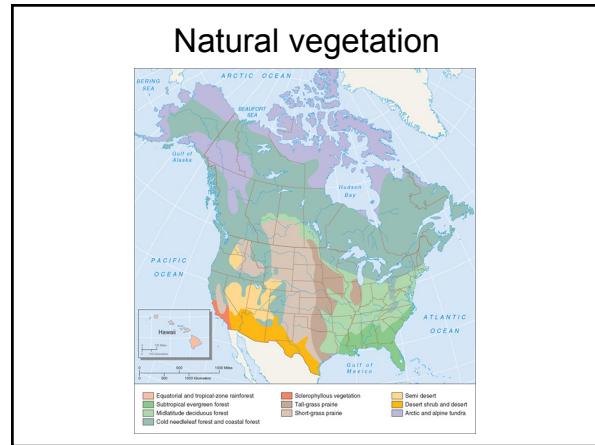

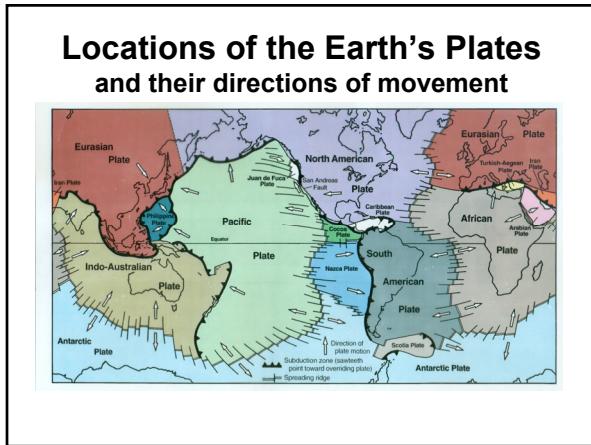

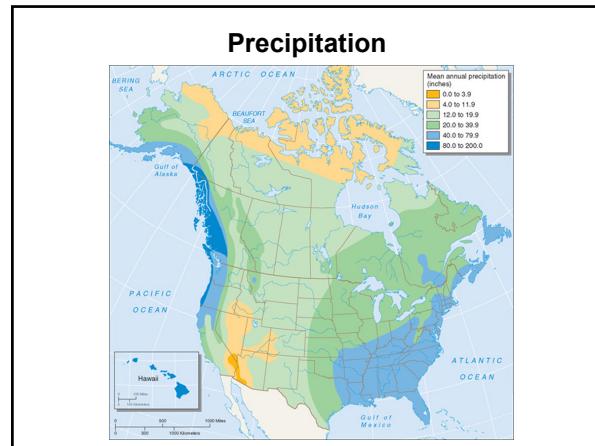

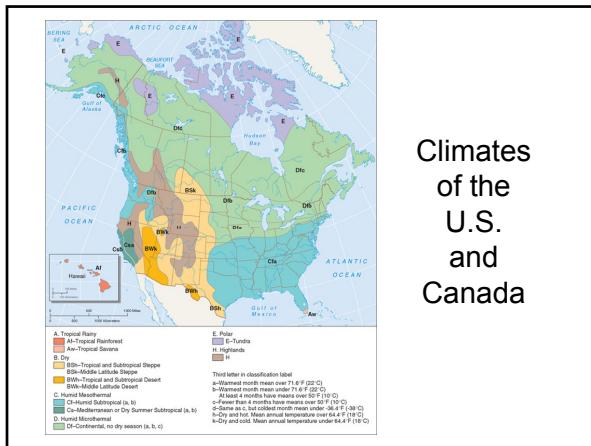

Marine West Coast Climate:
A climate that typically occurs on the west side of continents roughly between latitudes 40-60.

Marine West Coast Climate

- A relatively warm, moist climate that typically occurs on the west side of continents between latitudes 40-60.
- Conditions are the result of a warm ocean current offshore.
- For the latitudes in question, the climate is remarkably mild.

A Glacially Carved U-shaped Valley

A fiord is a narrow inlet of the sea between cliffs or steep slopes created by glacial erosion.

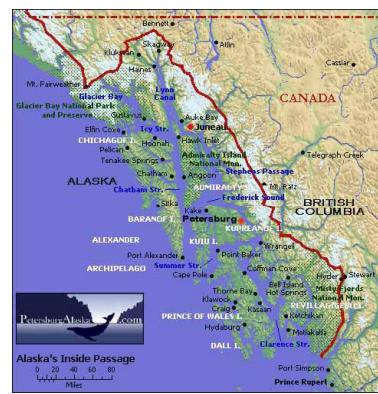

A fjorded coast is a coastal area characterized by numerous fiords, making overland travel along the length of the coast tedious or impossible. Examples in North America:

- The Alaskan panhandle
- The coast of British Columbia
- The western coast of Vancouver Island
- Newfoundland and Labrador

The Inside Passage

The Inside Passage is a system of deep and scenic navigable waterways between the mainland of British Columbia and southern Alaska, and the adjacent archipelago that was created by ice-age glaciers.

Lumber mill in Quesnel, BC

In seed tree cutting, several mature trees are left standing to generate seeds to produce the next generation of forest.

Clear cutting

Entire areas of forest are cut down, eventually to be replanted with hybrid seedlings

Permafrost is a permanently frozen layer of soil that underlies the arctic tundra. It poses serious problems for construction projects because any warmth may lead to melting of the permafrost, subsidence of the built object, and structural failure.

Utility lines in a permafrost zone must be above ground

Trans-Alaska Pipeline

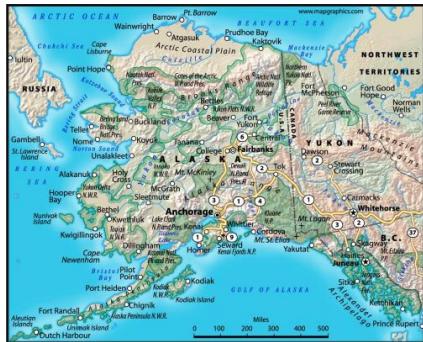

Valdez Oil Terminal

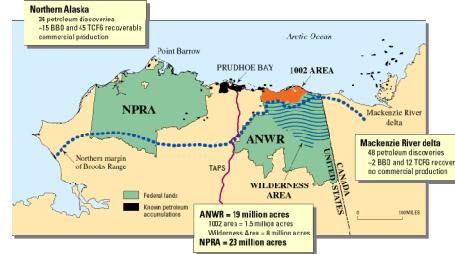

**"North Slope Oil" is so-called because
the oil fields lie north of the Brooks
Mountain Range**

Alaska's oil fields

The Alaskan tundra (pipeline is faintly visible)

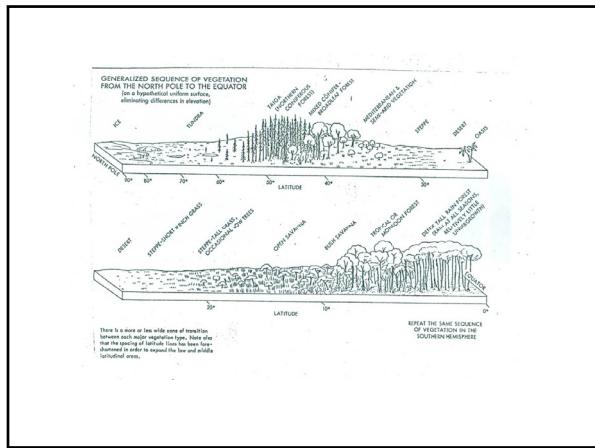

Tundra is a treeless arctic habitat characterized by cold, harsh winters, a short growing season, and possible frost during any month of the year. Vegetation includes low-growing grasses, an occasional stunted shrub, and mosses and lichens.
